OUR CARBON FOOTPRINT

Murray Birrell's Carbon Footprint Reduction Target Receives Gold Standard Validation

The Science Based Targets initiative (SBTi) is a global body enabling businesses to set ambitious emission reduction targets in line with the latest climate science. It is focused on accelerating companies across the world to halve emissions before 2030 and achieve net-zero emissions before 2050.

The initiative is a collaboration between CDP, the United Nations Global Compact, World Resources Institute (WRI) and the World Wide Fund for Nature (WWF) and one of the We Mean Business Coalition commitments. The SBTi defines and promotes best practice in science-based target setting, offers resources and guidance to reduce barriers to adoption, and independently assesses and approves companies' targets.

www.sciencebasedtargets.org@sciencetargets

The latest climate science from the IPCC - described by the UN as "code red for humanity" - shows it is still possible to limit global temperature rise to 1.5°C, but we are dangerously close to that threshold.

With this in mind, Murray Birrell has committed to set near-term company-wide emission reductions in line with climate science with the SBTi.
